[REDACTED] Targets - Romania

#### OBJECTIVE

All targets listed below are sought under objective II d. of  
DDID 4/6, dated 30 October 1956:

"The strengths and weaknesses of the Soviet (including satellite) economy, with particular reference to its ability to support a major war; the motivation, character and magnitude of current economic development programs, their implementation and their effect upon the economic, political, and military strength of the Soviet Bloc; the capabilities and vulnerabilities of the Soviet and satellite internal communications system."

#### BACKGROUND

Russia is the most secretive of the satellite countries in regard to the volume, direction and composition of Russia's foreign trade, as well as the nature of its international financial activities. Three Russian export commodities - wood, petroleum and cereals - are in strong demand both within the Bloc and in the West, but marketing opportunities for Russia's other exports, especially industrial goods, are slight. As a result of reparations and other war-related indebtedness due to the USSR, many of Russia's most marketable exports have been absorbed by the USSR and Russia has been forced to seek export markets for its industrial products in order to pay for its necessary imports. The end of reparations has never been announced in Russia; although part of Russian indebtedness to the USSR arising out of Russia's repurchase of the Soviet share in the foreign was recently cancelled, the amount still outstanding is not known.
